

Each dot below represents one star in our Milky Way Galaxy ... the Number of printed pages required to represent the stars of our Galaxy would be **120,772,947** which is based on the estimate of over 200 Billion stars. Our Sun is but one of those stars.

If the printed pages were then arranged end to end they would cover **19,022** Miles ... nearly 2/3 the distance around earth at the equator. There are billions of Galaxies in our Universe.
